

Microsoft Baseline Security Analyzer

MUSTAFA SERHAT DÜNDAR, <SERHAT AT SERHATDUNDAR DOT COM>,

11/06/2009

DESTEKLEDİĞİ SÜRÜMLER : Windows Server 2003, Windows 2000 ve XP

GEREKENLER : MSXML 3.0 SP2 veya XML Parser. Eğer ağda arama yapacaksanız kurulacak makinede bir de Client for Microsoft Networks servisinin çalışması.

TARANABİLEN UYGULAMALAR :

Windows NT 4.0 SP4 veya üst sürümler

Windows 2000

Windows XP

Windows Server 2003

IE 5.01 veya üstü

IIS 4.0 ve IIS 5.0 (IIS vulnerability taramasi için)

SQL 7.0 ve SQL 2000 (SQL vulnerability taramasi için)

Microsoft Office 2000 ve XP (Desktop Application vulnerability taramasi için)

UZAKTAN TARAMA İÇİN : Tarama yapılacak makinede local admin yetkisine sahip olmak. Yine makinenin üzerinde sunucu servisinin, remote registry servisinin çalışması gerekmektedir.

Baseline Security Analyzer

Which computer do you want to scan?

Enter the name of the computer or its IP address.

Computer name: DRKGROUP\CLBR-E1614F7672 (this computer)

IP address: remote scan

Security report name: %D% - %C% (%T%)
%D% = domain, %C% = computer, %T% = date and time, %IP% = IP address

Options:

- ☒ Check for Windows administrative vulnerabilities
- ☒ Check for weak passwords
- ☒ Check for IIS administrative vulnerabilities
- ☒ Check for SQL administrative vulnerabilities
- ☒ Check for security updates
- ☐ Configure computers for Microsoft Update and scanning prerequisites
- ☐ Advanced Update Services options:
 - ☐ Scan using assigned Windows Server Update Services (WSUS) servers only
 - ☐ Scan using Microsoft Update only

Learn more about [Scanning Options](#)

NELER YAPABİLİR :

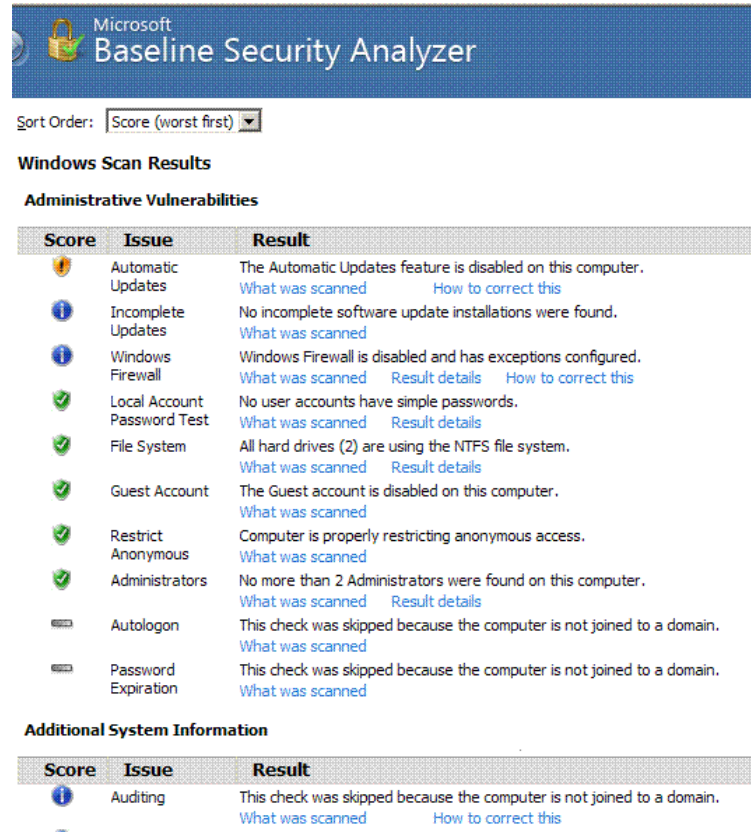

Windows administration zayıflıklarını bulup test eder. (Windows administrative vulnerabilities)

Zayıf parolaları test eder. (Weak passwords)

IIS administration zayıflıklarını bulup test eder. (IIS administrative vulnerabilities)

Sql administration zayıflıklarını bulup test eder. (SQL administrative vulnerabilities)

Update'lerin kontrol eder – yapılandırır.

The screenshot displays the Microsoft Baseline Security Analyzer (MBSA) interface. At the top, the title bar reads "Microsoft Baseline Security Analyzer". Below the title bar, there is a "Sort Order:" dropdown menu set to "Score (worst first)". The main content area is titled "Windows Scan Results" and "Administrative Vulnerabilities". It contains a table with three columns: "Score", "Issue", and "Result". The table lists various system settings and their security status. Issues are marked with icons: a yellow shield with a red exclamation mark for warnings, a blue 'i' for information, and a green checkmark for success. The table lists 12 items, including Automatic Updates, Incomplete Updates, Windows Firewall, Local Account Password Test, File System, Guest Account, Restrict Anonymous, Administrators, Autologon, and Password Expiration. The last two items are marked as skipped because the computer is not joined to a domain. Below the table, there is a section titled "Additional System Information" which also contains a table with three columns: "Score", "Issue", and "Result". It lists one item, "Auditing", which is also marked as skipped because the computer is not joined to a domain.

Score	Issue	Result
Warning	Automatic Updates	The Automatic Updates feature is disabled on this computer. What was scanned How to correct this
Information	Incomplete Updates	No incomplete software update installations were found. What was scanned
Information	Windows Firewall	Windows Firewall is disabled and has exceptions configured. What was scanned Result details How to correct this
Success	Local Account Password Test	No user accounts have simple passwords. What was scanned Result details
Success	File System	All hard drives (2) are using the NTFS file system. What was scanned Result details
Success	Guest Account	The Guest account is disabled on this computer. What was scanned
Success	Restrict Anonymous	Computer is properly restricting anonymous access. What was scanned
Success	Administrators	No more than 2 Administrators were found on this computer. What was scanned Result details
Skipped	Autologon	This check was skipped because the computer is not joined to a domain. What was scanned
Skipped	Password Expiration	This check was skipped because the computer is not joined to a domain. What was scanned

Additional System Information

Score	Issue	Result
Information	Auditing	This check was skipped because the computer is not joined to a domain. What was scanned How to correct this
